

Use Case Scenario: Exporting Large Pagelist Data to CSV File and Storing It in the Repository

1. Create a Data Set.

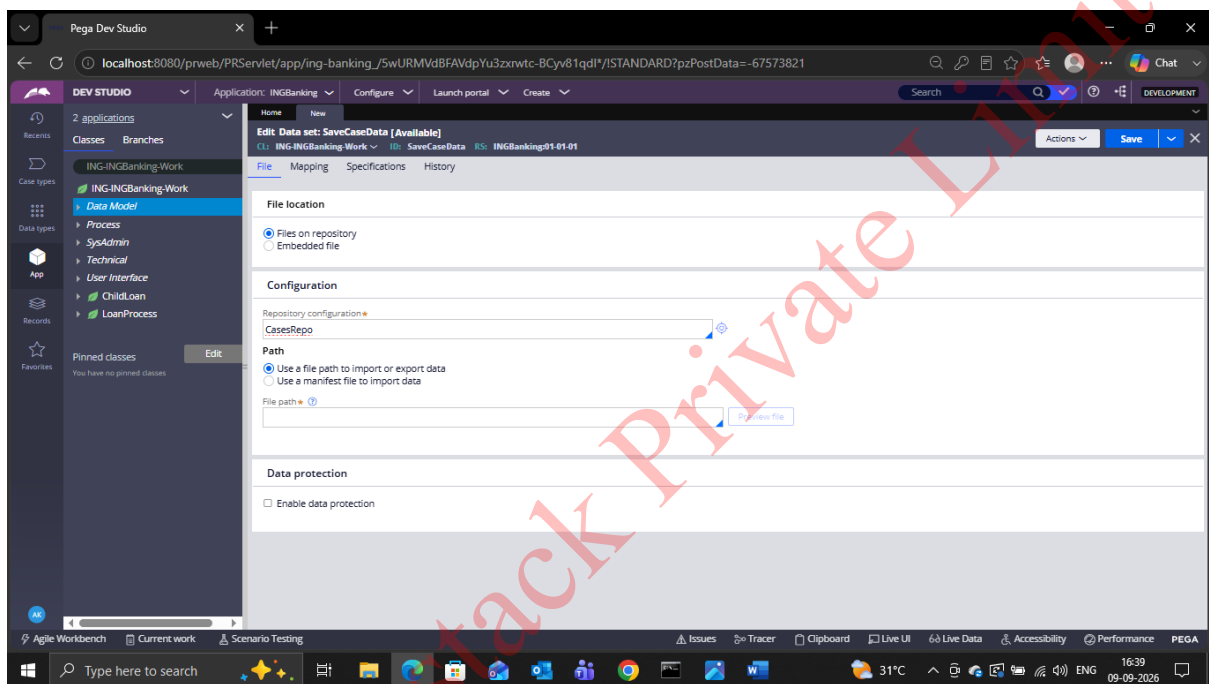

2. Select type as File.

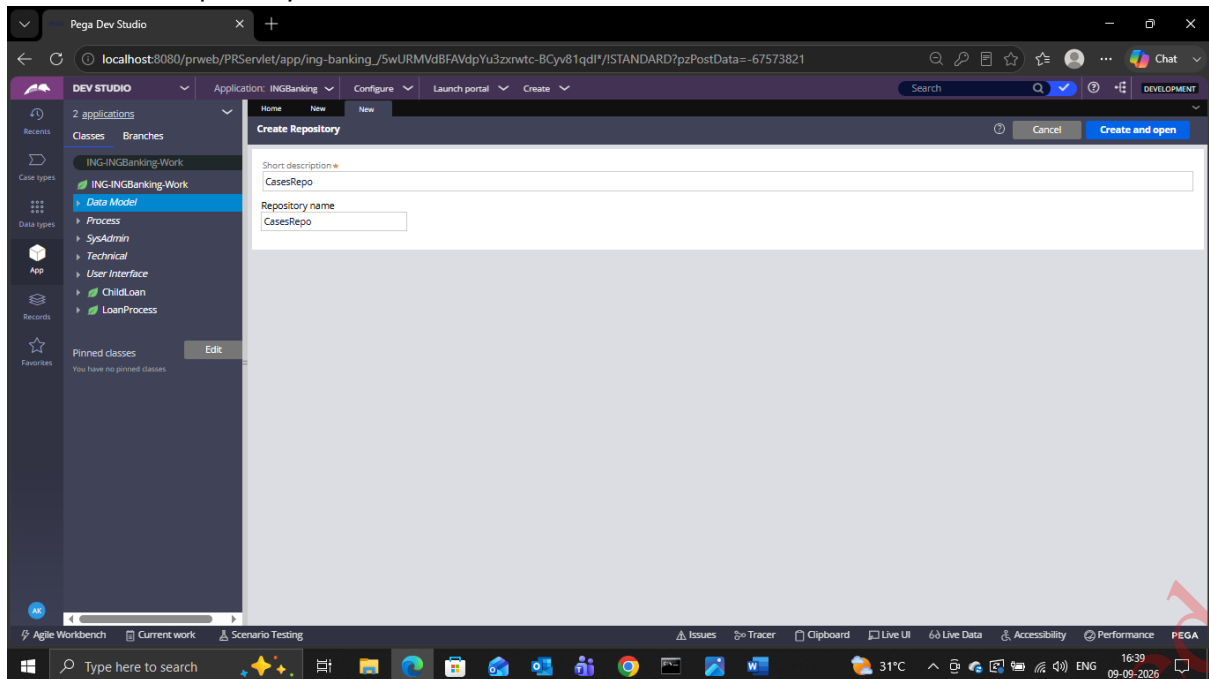

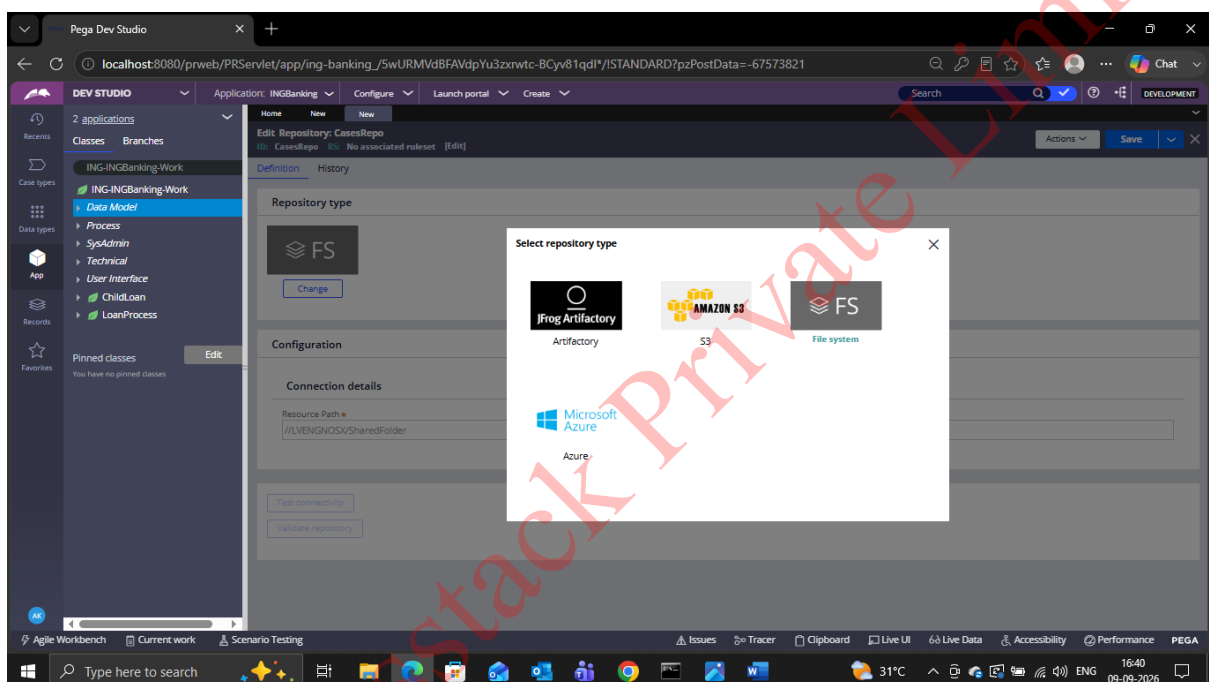

3. Select Files on repository.

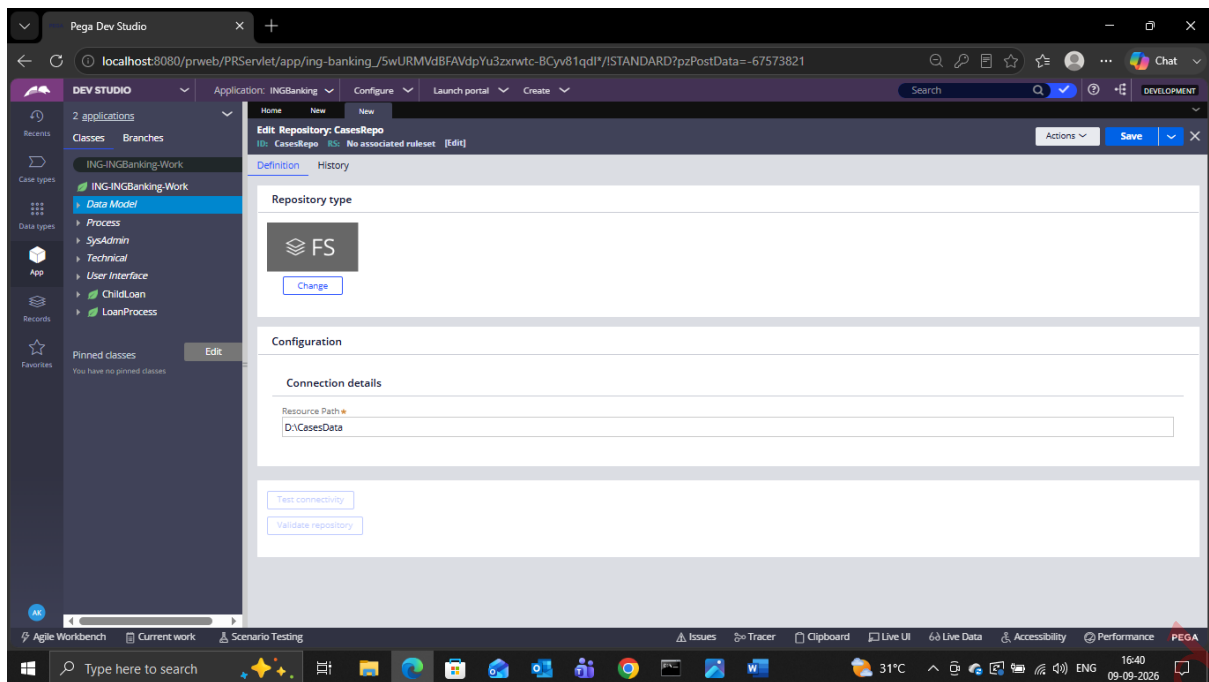

4. Create one repository.

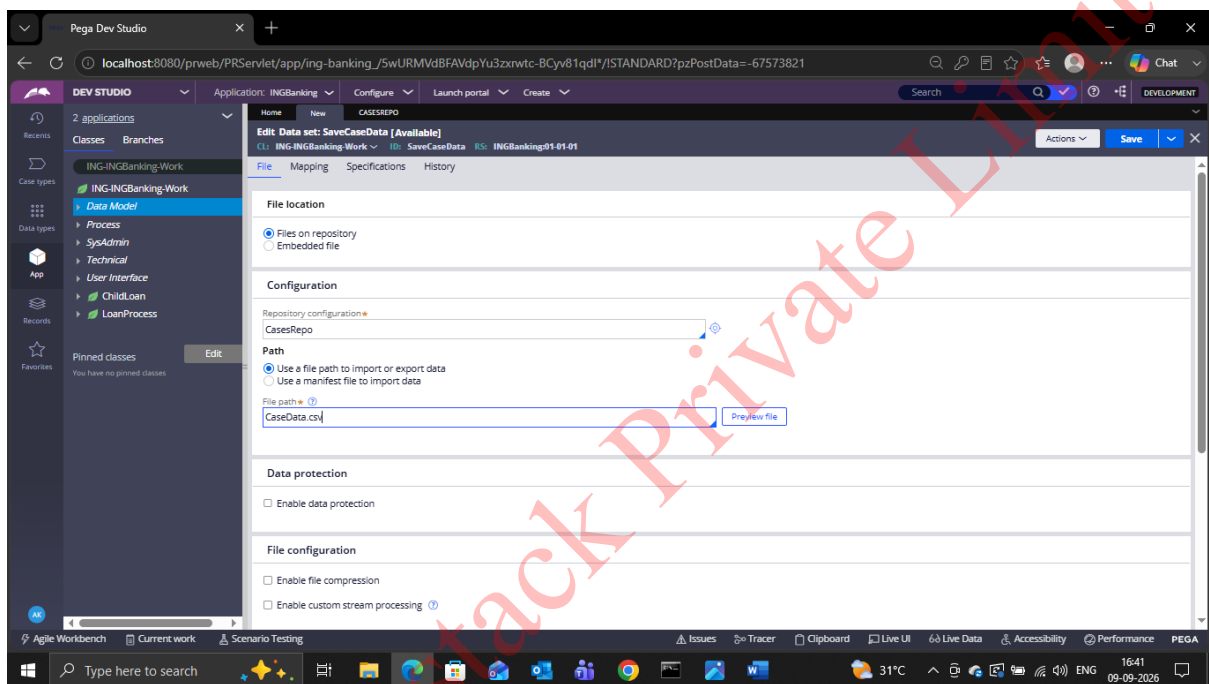

6. Select Repository type and give resource path.

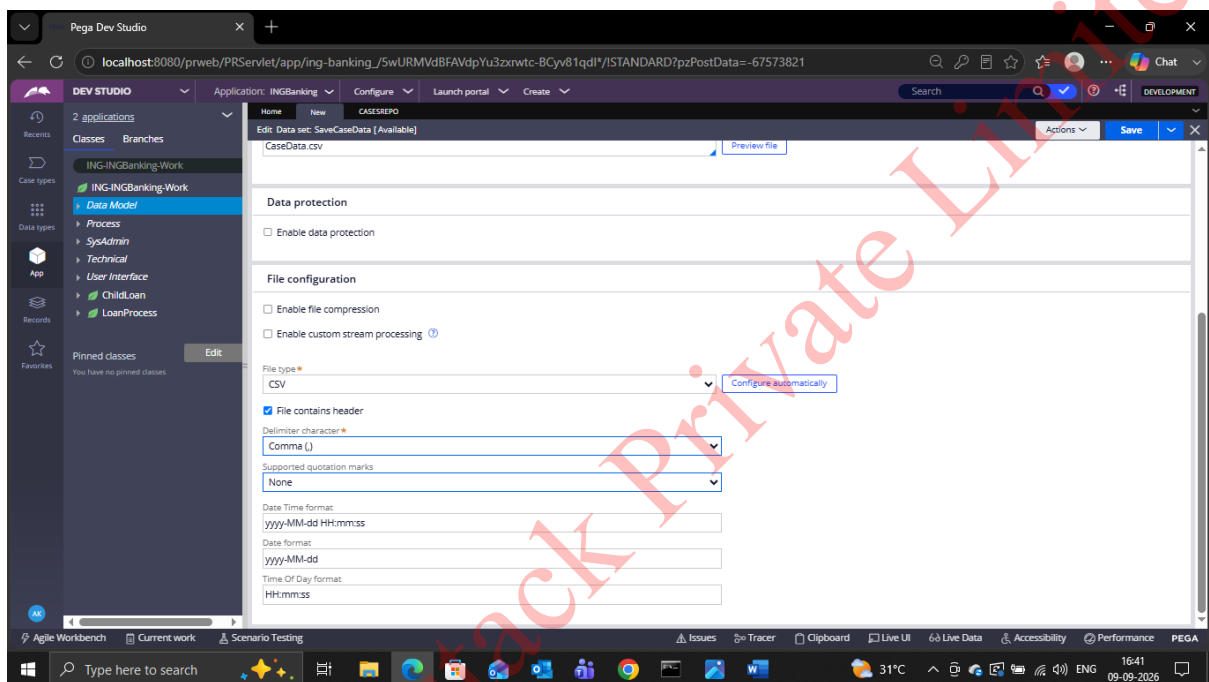

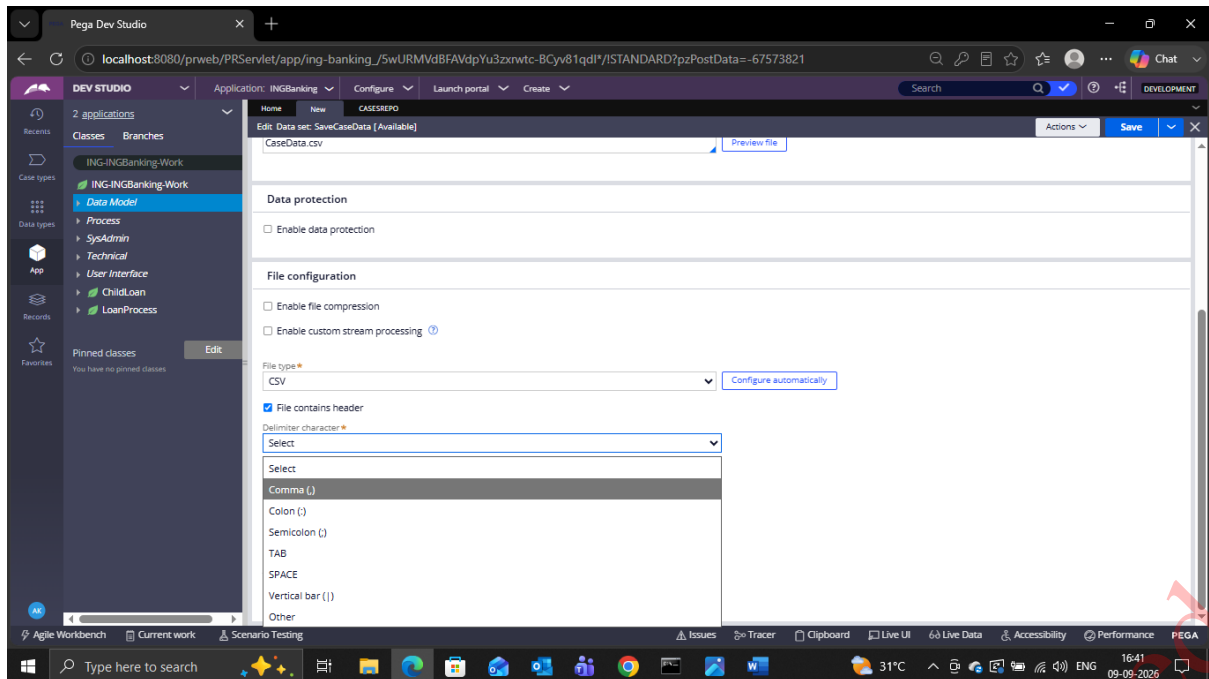

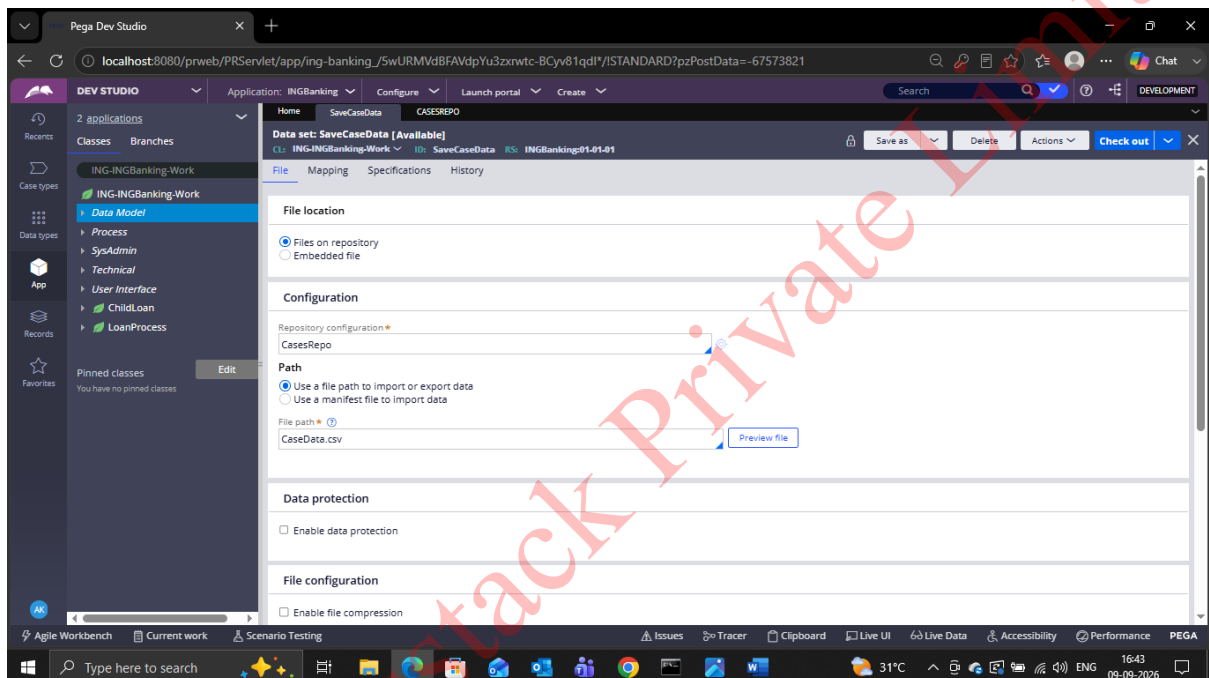

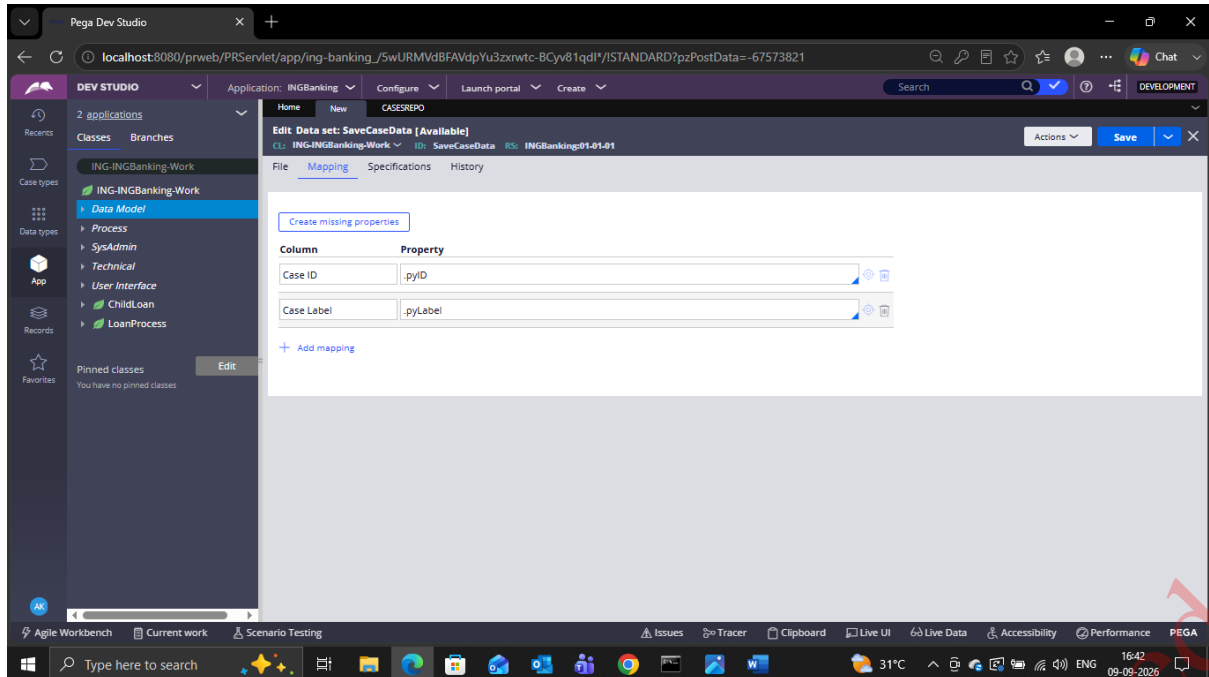

7. Add the repository to the data set.

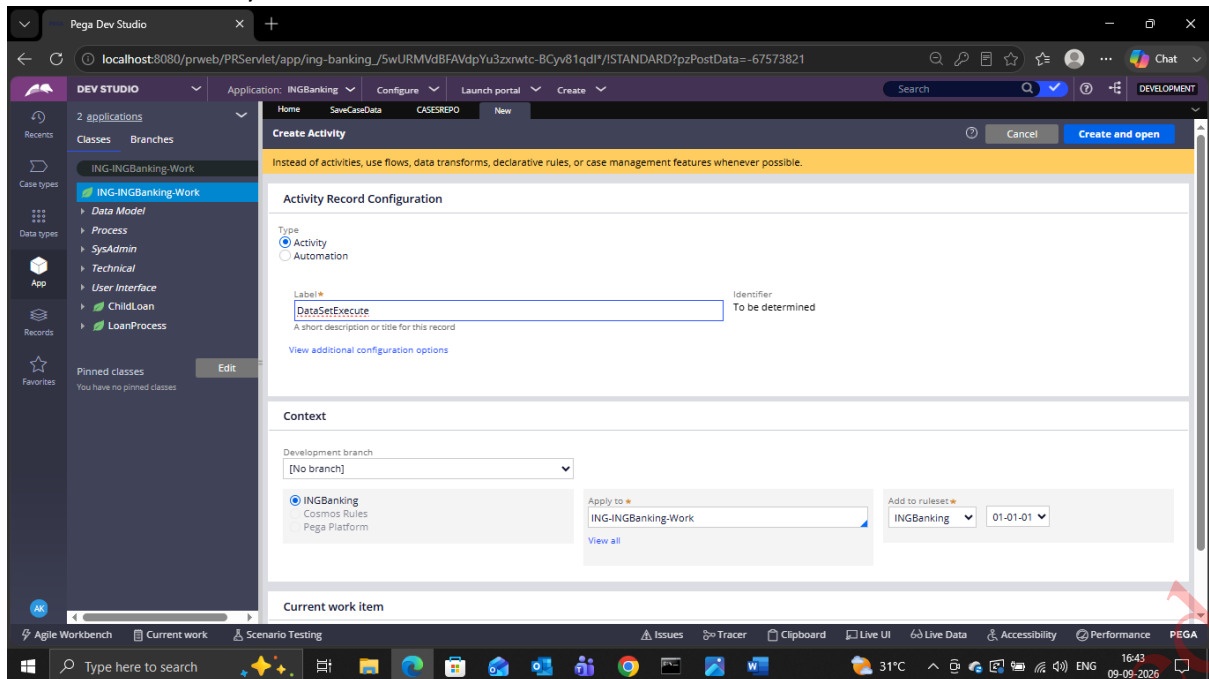

8. Select the delimiter character.

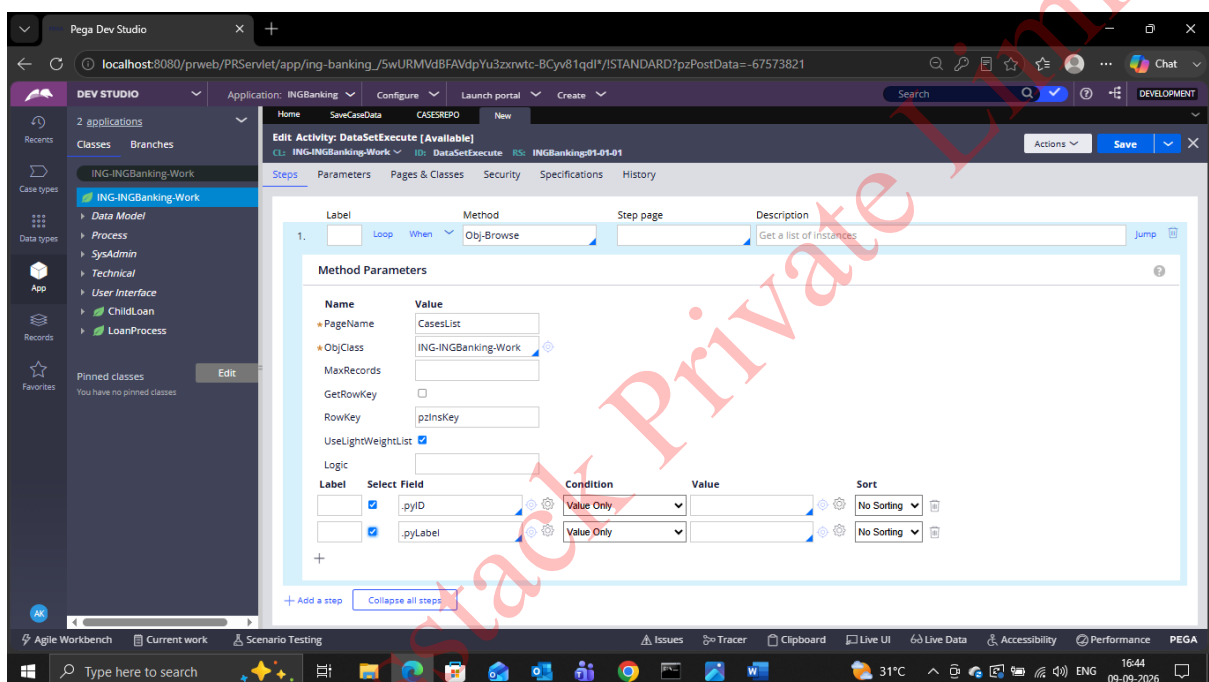

9. Map the clipboard properties to CSV file column headings and save the dataset.

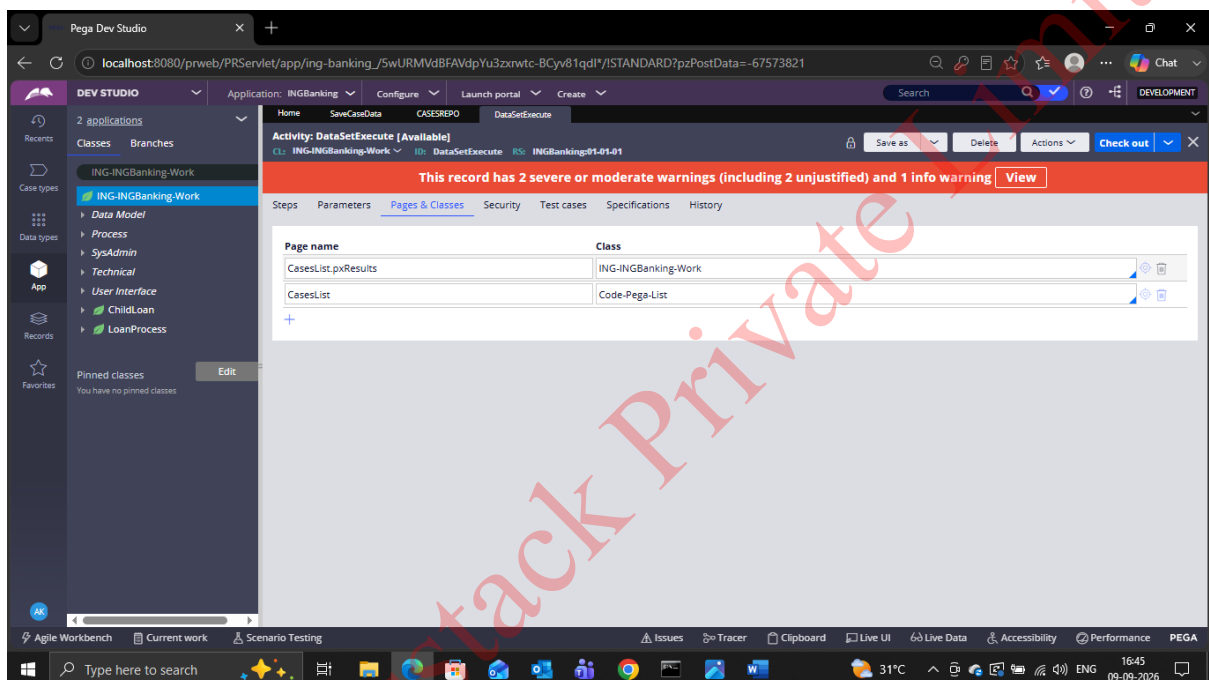

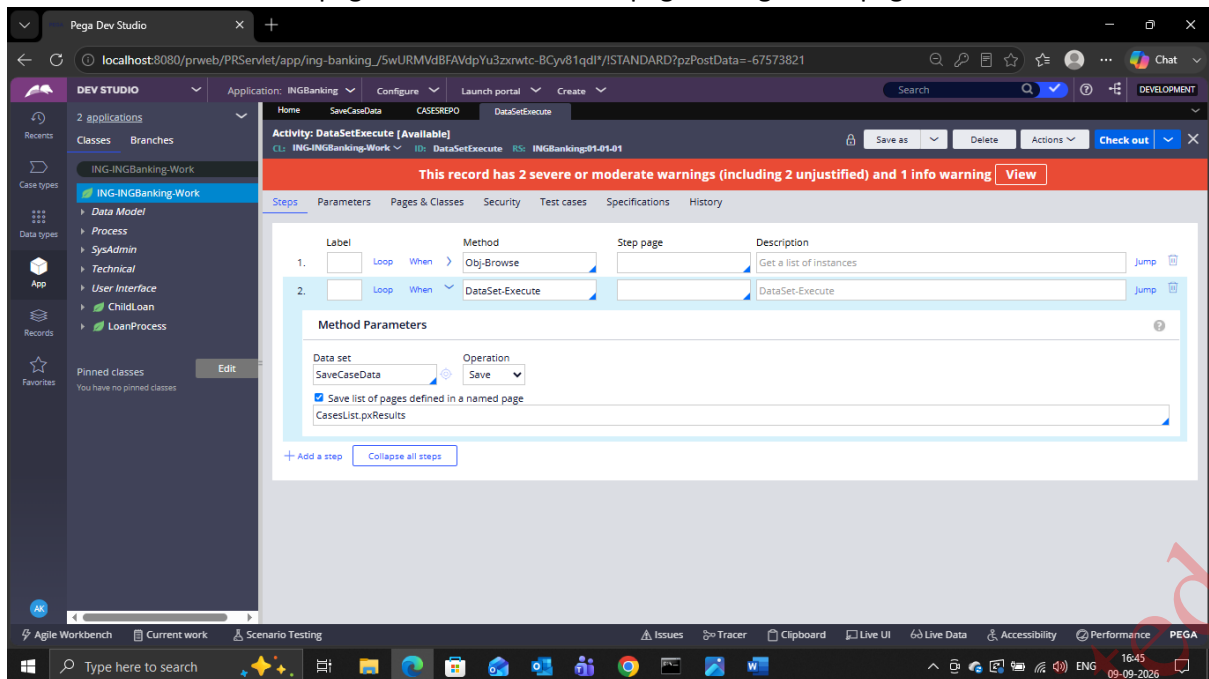

10. Create an activity.

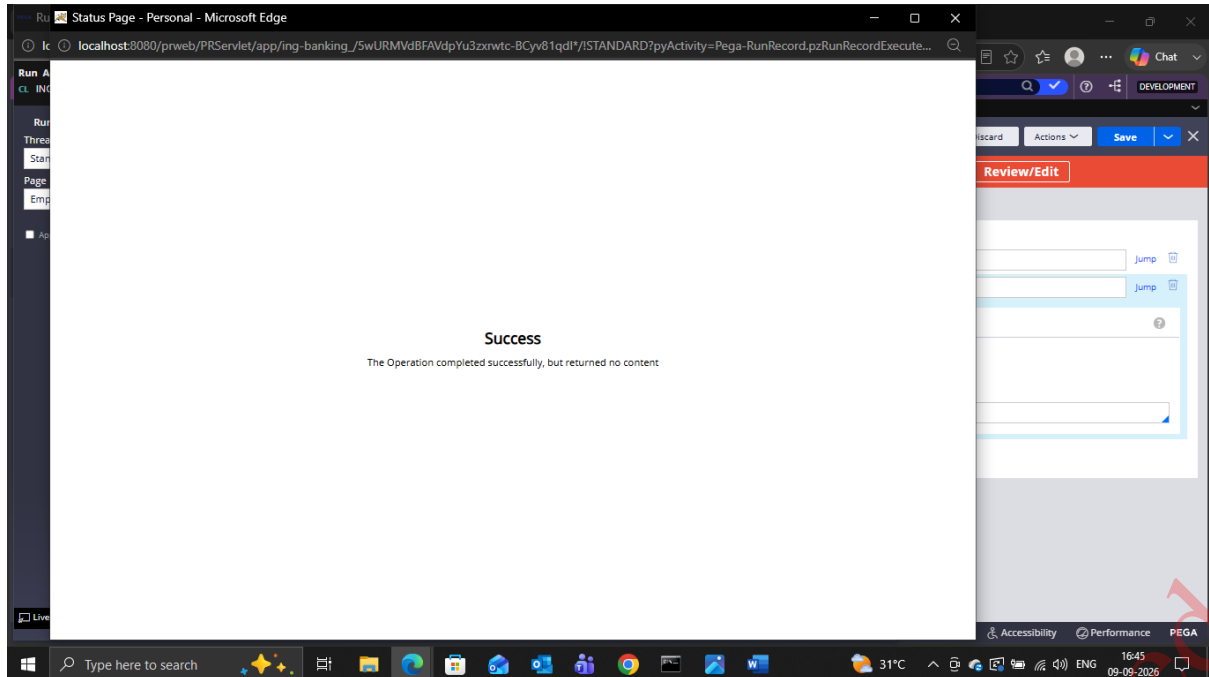

11. Populate cases data onto a pagelist / Populate your desired pagelist into the activity.

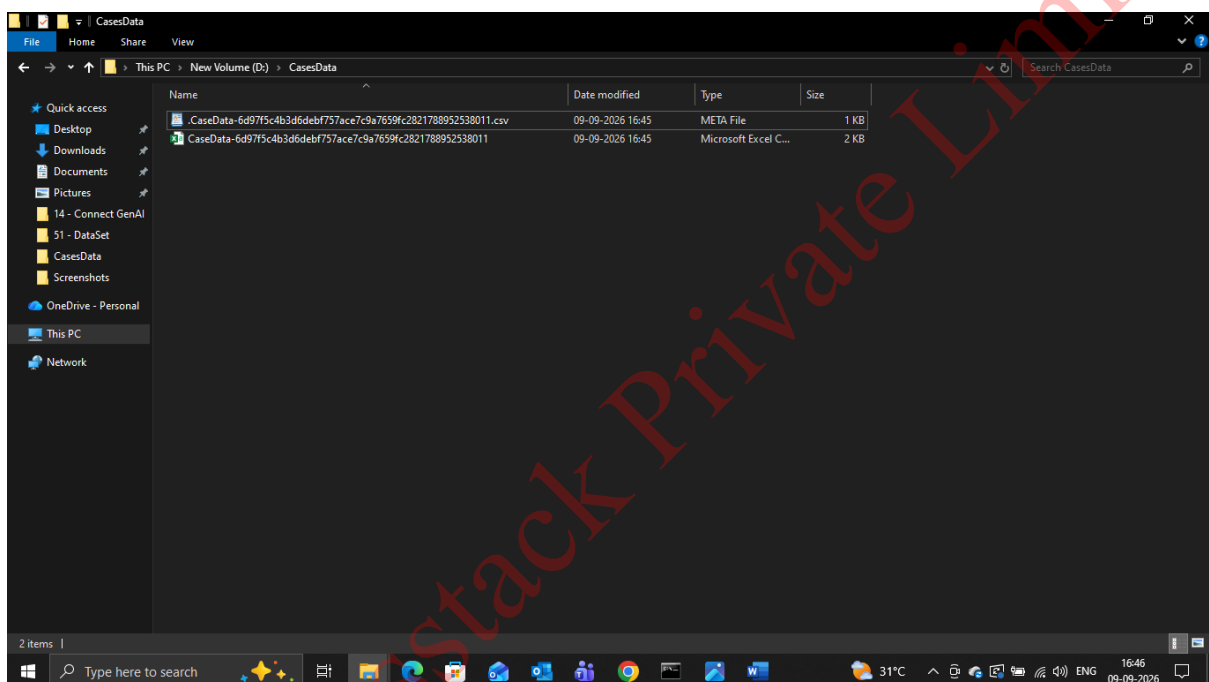

12. Call the dataset which we have created in the activity and perform save operation. Now enable the checkbox “Save list of pages defined in a named page” and give the pagelist.

13. Now run the activity.

14. We can observe that file is created in the repository.

15. We can observe that the data has been extracted using data set and got saved into the repository.

The screenshot displays a Microsoft Excel spreadsheet with the following data:

Case ID	Case Label
C-1	Child Loan
C-1001	Child Loan
L-1	Loan Process
C-2001	Child Loan
L-1001	Loan Process
L-1002	Loan Process
L-2001	Loan Process
L-2004	Loan Process
L-2002	Loan Process
L-2003	Loan Process
L-2005	Loan Process
L-2006	Loan Process
L-2007	Loan Process
L-2008	Loan Process
L-2009	Loan Process
L-2010	Loan Process
L-2011	Loan Process
L-2012	Loan Process
L-2013	Loan Process
L-2019	Loan Process
L-2022	Loan Process
L-2014	Loan Process

The Excel window title is "CaseData-6d97f5c4b3d6deb7f757ace7c9a7659fc2821788952538011 - Excel". The ribbon shows the "Home" tab with various formatting options. The status bar at the bottom indicates "Ready" and the date "09-09-2026".
