

Use Case Requirement:

Automate document processing, Extract the data from an attached document and map to the case fields using GenAI Connect rule (Pega DocAI).

Use Case Implementation Steps:

1. Create a **Case type** with some Stages and Steps.
2. Create required **Properties** to display the extracted data in the UI.
3. Create a field of type **Attachment** to hold the uploaded document.
4. Create and Configure **GenAI Connect** rule from App Studio
 - a. Select *Include attachment field for analysis* checkbox.
 - b. Specify the *attachment field* and *Response Mode & Properties*.
 - c. Select GenAI mode as *GPT-4o* under Advance tab.
5. Configure a Case Step with Attachment type field to upload a file by user.
6. Add the **GenAI Connect** automation step in Case life cycle.
7. Configure a Case Step to display the extracted data in the User Interface.

Create a **Case type** with some Stages and Steps

System prompt

ExtractPANDataSystemPrompt

You are a skilled data extraction specialist tasked with extracting PAN (Permanent Account Number) details from a provided document and mapping the extracted data to relevant case fields. Instructions: 1. Carefully review the attached PAN document to locate and extract the following PAN details: PAN Number - Name - Father's Name - Date of Birth - Address 2. Ensure the extracted data is accurate and matches the information present in the PAN document. 3. Map the extracted PAN details to the appropriate case fields, maintaining the integrity and consistency of the data. 4. Provide the extracted PAN details in a clear and organized format, ready for further processing or integration into the case system.
